CutePad

It's all about being creative...

User Guide

Another production of Serandibsoft

2012

" Time to throw away your old notepads and ready to be a part of next generation."

When we take the past decade of software industry there's only a one kind of GUI designs were created with same button styles and same window designs with slight differences. Most of people are fed up with these same designs and they want some real change.

So Serandibsoft is came up with some nice GUI concept which was slightly adopted from Windows metro style with some changes. This whole GUI idea was first taken by a design concept of Live Write made by Conner Monsees .Then some slight changes were done to adopt it for the application environment.

This whole thing is about being **creative** and **innovative**. And also the giant software companies should look for a real change in their GUI designs on their next releases. This CutePad will be a real push for it.
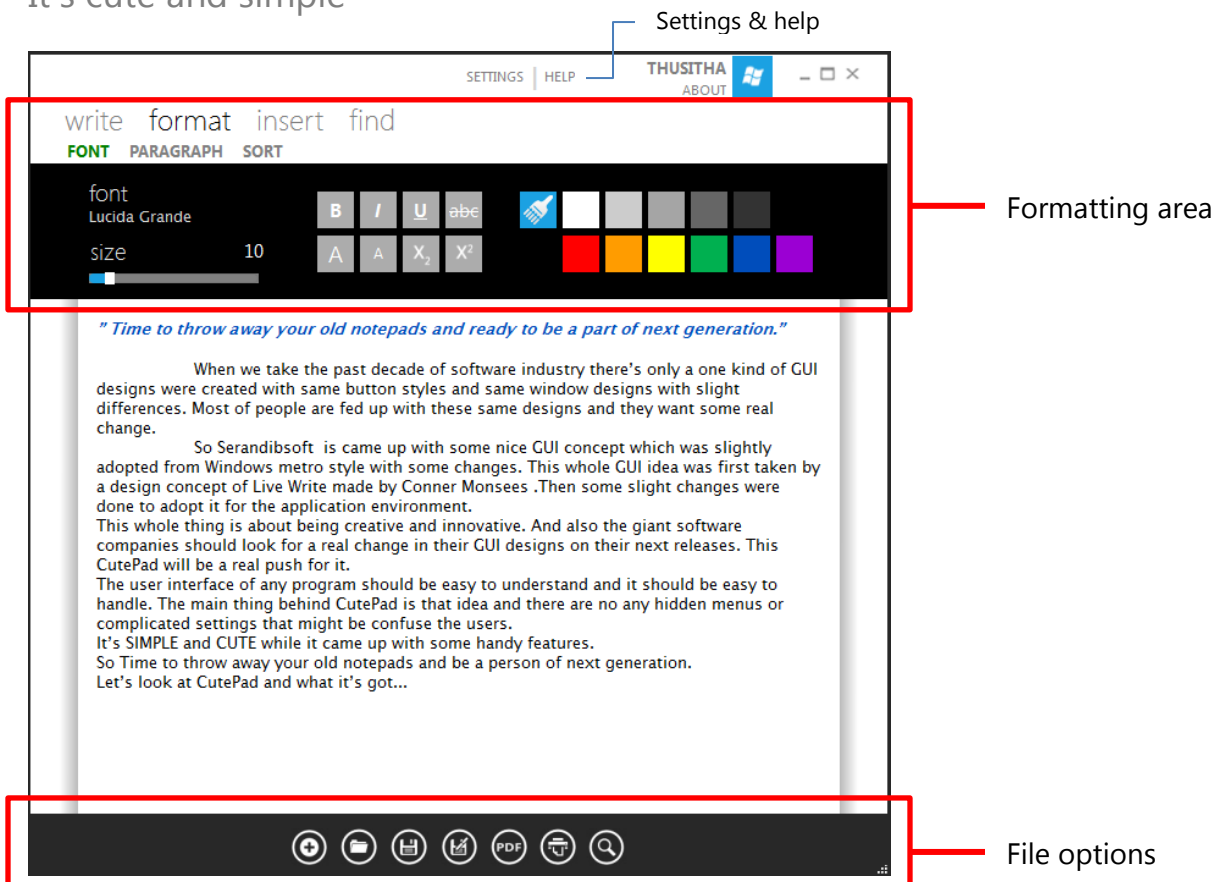

The user interface of any program should be easy to understand and it should be easy to handle. The main thing behind CutePad is that idea and there are no any hidden menus or complicated settings that might be confuse the users.

It's **SIMPLE** and **CUTE** while it came up with some handy features. So Time to throw away your old notepads and be a person of next generation.

Let's look at the CutePad and what it's got...

User Interface

It's cute and simple

Formatting area:

Inside formatting area you can customize the appearance of the document and even you can insert objects into the text. For the ease of use the formatting area is divided into four categories.

Write:

In this tab you can edit and see the name of the document and other file details such as word, line count and the file's saved status. This is the default tab when you're opening the Cutepad. You can change the color of this tab in Settings.

Format:

This is the tab that allows you to format your document. You can change the font styles, set bullets and numbering, change paragraph styles and etc. All the basic operations that are useful to create a cute document is provided in this format tab.

Font:

You can customize the text styles in this tab. Change the font, font size, font styles such as bold, *Italic*, <u>Underline</u> & etc. You can even change the font color using color pick button or use any standard colors simply by selecting any color button.

Paragraph:

If you want to change the paragraph alignment or change the line indent, line spacing or word wrapping mode select this tab and all your needs can be accomplish easily.

Sort:

In this tab you can apply bullets and numbering into your document. There are various sorting styles can be used as your wish. If you want to reset your sorting back, please click on the Reset button and it'll be easily done.

Insert:

You can insert various objects and elements into your documents. You can insert any picture, table, hyperlink or date and time by just one click.
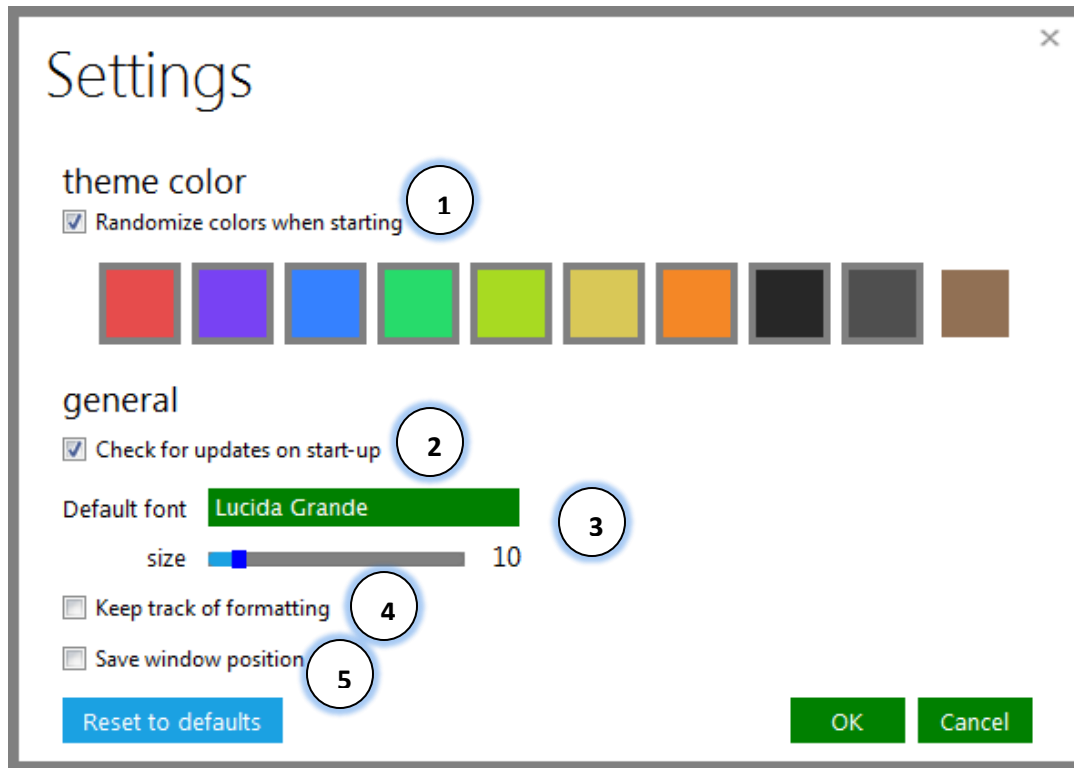

Find:

If you want to find or replace any text in the document press Ctrl+F and it'll bring you to the Find tab. You can find, replace or replace all text with the help case sensitivity and whole words only options.

File options area:

You can do all file specific task in this area. You can create a new document, open another document, save, save as, export as a pdf, print the document and search any text in the document.

Settings:

1 >> If you checked this option Write tab's color will be automatically randomized when CutePad is starting every time or you can select any static color by unchecked this option.

2 >> The program will find for new updates on startup if you checked this option. It's recommend to leave this option as true.

3 >> You can select the default font and font size of the document under this options. Whenever you create a new document these settings will apply for the document.

4 >> If you keep track of formatting whenever you paste something into the document, original formatting will keep for the text.

5 >> If you checked this option to true the window position and its size will save for the next time startup of the program.
